

TruSec Consulting provides computer forensic services including gathering and analysis of records from electronic devices to help find the evidence you need to process your case!

We have one of the most comprehensive service offerings in the industry, ranging from forensic imaging and eDiscovery hosting to data recovery and proactive employee monitoring services.

Our forensic lab utilizes high-speed drive duplicators and high-end forensic workstations to process evidence, all utilizing commercial forensic software combined with secure encrypted storage for case data.

Below is an example of common issues we can assist you with:

- ✓ Computer and Mobile Device Analysis
- ✓ Employee productivity issues
- ✓ Persons involved in civil litigation as the defendant or plaintiff in cases related to sexual harassment, theft of company data, improper termination of employment and other civil matters
- ✓ Pornography issues
- ✓ Illegally obtained software
- ✓ Detection and removal of computer malware including viruses, spyware, trojans, etc.
- ✓ Recovery of deleted data

We provide cost effective, end to end and reliable electronic evidence analysis combining Data Collection, Processing, Analysis, eDiscovery, Reporting and Testimony to individuals, businesses, legal and government organizations.
